WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print upside down (top face on the bed), 2 mm walls, 100 % infill, in flame-retardant polycarbonate in an enclosed printer.

Outside 134 x 104 x 26.1 mm, open at the bottom.

Four 3.4 mm holes in the top over the pillars: 12 mm from the signal end 40 each side, and 128 mm from it 44 each side.

Signal-end notch 68 wide, from 26 below to 42 above the centre line, open at the bottom, 15.1 mm tall: the connectors and harness sit in it. Power-end notch 98 wide, 5.1 mm tall, open at the bottom: the board passes under it with 1 mm clear.

Probe notch 8 wide, 9.1 mm tall, in the near side wall.

Fit: it rests on the four pillars only; its walls stand 0.5 mm clear of the plate. Four M3 x 6 pan-head screws.

Check: on the pillars it does not rock and touches no part.
